LinkedIn: <https://linkedin.com/in/brendanmurty>

Career Profile

I specialise in actively leading teams to architect scalable, well-defined technical solutions. By implementing optimized tools and processes, I create productive and inspiring engineering cultures for organisations.

With over 15 years of experience working in various roles in the software industry, I've learnt to embrace new technologies and assess them for feasibility for use in projects where they suit business goals.

Core Skills

- ❖ **Team Leadership**
With a focus on ownership, camaraderie, mentoring, feedback, and constant learning.
- ❖ **Cloud Infrastructure**
Recent experience with both AWS and GCP.
- ❖ **Project Management**
From initial design to product launch.
- ❖ **Change Management**
Aligning with the team on the way forward, clearly communicating reasoning.
- ❖ **Software Engineering**
Most recently in TypeScript, Node, React and Python.
- ❖ **Version Control**
Advanced Git experience including Release Management and Branching Strategies.
- ❖ **Technical Processes**
I work with teams to define and document processes to help everyone more efficient.
- ❖ **Client Engagement and Consultations**
I'm comfortable working directly with clients to identify their needs.
- ❖ **Generative AI**
I've built tooling and policies for technical teams to best use these new tools while protecting company IP and supporting delivery goals.

Key Achievements

- ❖ Achieved very positive feedback from an anonymous internal upwards feedback process for a technical team I managed.
- ❖ Applied improved tooling, documentation and templating for a previously complicated software release process. This included a set of interconnected systems with different tech stacks, which was previously extremely reliant on a high-level understanding of undocumented system requirements.
- ❖ Reviewed, scoped and standardised technical infrastructure for an entire company.
- ❖ Designed and implemented various technical process improvements for a fast-paced engineering team.
- ❖ Furthered internal knowledge and improved engineering processes for a complex legacy data importing system while ensuring that incoming requests matched the supported features of the system.
- ❖ Took ownership of a challenging internal documentation generation process by scoping out tasks, detailing technical requirements, selecting a different programming language to encourage learning in the team, and ensuring that all Engineers in the team could effectively contribute to the project.
- ❖ Built a modular system for a common customer problem to lower code duplication and to allow other customers to benefit from existing engineering work.
- ❖ Managed a development team of varied skill levels, scoped out suitable tasks for each Developer and guided them to complete those tasks.
- ❖ Led development on a complicated e-commerce site with a short deadline and varied advanced features while integrating a third-party shipping and tax management plugin.
- ❖ Released a third-party Basecamp 2 client with a focus on quick use via mobile devices.
- ❖ Improved a legacy in-house CMS by adding a new dynamic content plugin system.

Career Summary

-
- ❖ **Technical Lead at FOB OH**
Nov 2025 - May 2026
 - ❖ **Dedicated Technology Team Member** at Officeworks
Apr 2025 - Nov 2025
 - ❖ **Lead Software Engineer** at Liquidise
Mar 2023 - Aug 2024
 - ❖ **Engineering Team Lead** at Trace
Aug 2022 - Jan 2023
 - ❖ **Senior Software Engineer** at Deputy
Feb 2021 - May 2022
 - ❖ **Technical Lead** at Jomablue
Mar 2020 - Nov 2020
 - ❖ **Development Lead** at 4mation
May 2019 - Mar 2020
 - ❖ **Web Developer** at 4mation
Dec 2017 - May 2019
 - ❖ **ACT Project Manager** at Sentral Education
Sep 2016 - Dec 2017
 - ❖ **Web Developer** at Sentral Education
Jan 2015 - Sept 2016
 - ❖ **Lead Developer, Siteflex Classic** at Solutions Outsourced
Jul 2014 - Dec 2014
 - ❖ **Developer and Creator** at UpcomingTasks
Sep 2012 - Nov 2016
 - ❖ **Siteflex Back-End Developer** at Solutions Outsourced
Jun 2012 - Jun 2014
 - ❖ **Web Developer** at Solutions Outsourced
Sep 2009 - May 2012
-

Recent Experience

Technical Lead

FOB OH

As the Technical Lead at FOB OH, I worked directly with the Co-Founders (CEO and CPO) to ship new features, lead and mentor engineers, and built a high-performing engineering culture. I led and improved engineering practices, documentation, tooling, releases and deployments.

Lead Software Engineer

Liquidise

Worked closely with the Head of Product and Founder as part of the leadership team, where I led most technical decisions, planning, scoping and my own contributions to app-level code and infrastructure implementation.

Managed a small technical team including running personalised 1 on 1 discussions. Achieved very positive ratings and feedback from an anonymous internal upwards feedback process.

Managed all company technical infrastructure including migrating the main application systems to Docker Containers and Cloud Run deployments via GCP.

Completed an external Security Penetration test, including triaging reported risks, completing some myself and ensuring others were completed and tested thoroughly.

Scoped work for and managed interactions with external technical contractors, tested their work and worked with internal and external Software Engineers to progress complex features.

Migrated the public website to new GCP infrastructure, including building new CI/CD scripts, Docker containers and Cloud Run services.

Engineering Team Lead

Trace

Designed and implemented various technical process improvements for the fast-paced engineering team.

Created structures and detailed documentation to encourage knowledge sharing and accountability within the team.

Scoped out projects based on business requirements, reviewed designs, delegated tasks based on team skills and then took on building multiple projects and features.

Senior Software Engineer

Deputy

Built features on top of the company's core product, including custom reports and custom features to suit client needs.

Built software on the company's products using an internal framework similar in syntax to CoffeeScript.

Provided support to senior management by driving progress on internal technical projects and making technical solutions more scalable and reusable.

Built custom integrations with third-party systems.

Technical Lead

Jomablue

Worked closely with the Chief Technology Officer (CTO) and acted as a point of contact for advice and guidance on technology matters.

Built software on the company's product using Angular.

Led and managed a team of Developers at varying levels of experience; managed staff onboarding processes, provided clear objectives, and facilitated training and mentoring tailored

to individual needs.

Ensured the team could work efficiently on the product by running daily stand-up meetings, assessing bug reports, scoping out new feature requests, testing code changes, and building releases.

References

Amel Johny

Software Engineer at Liquidise, 2025

Brendan is one of those rare people who combines deep knowledge with the right attitude. He's always open to ideas, a great listener, and supports those around him. What stands out the most is how easy it is to talk to him — he listens, offers valuable insights, and helps you think outside the box. He's a leader who trusts his team, creating an environment where people feel confident and motivated.

Another takeaway from working with Brendan is how incredibly organised he is. He keeps detailed notes, plans ahead, and manages his time with impressive efficiency. Watching how he balances everything, from his calendar to his long-term vision, has been really inspiring and something I strive to apply in my own work.

Matt Mills

Acting CEO at Liquidise, 2024

I am writing to you to provide a reference for Brendan Murty, who worked at Liquidise as a Lead Software Engineer between the 6th of March 2023 and the 7th of August 2024.

Brendan is an outstanding individual who would be a valuable asset in any organisation. For us, he was a manager, developer, dev-ops and infrastructure lead, and a leader of the business all rolled into one person.

As the Lead Software Engineer, Brendan was responsible for overseeing all aspects of Engineering at Liquidise Limited. This was a dynamic role that required Brendan to be able to meet the demands of the business, whatever those might have been. To this challenge, Brendan handled everything with dedication and resourcefulness.

As a startup, the best solution is not necessarily always a technical one, and Brendan was always able to resolve any issues without over-engineering the solution.

As a manager, Brendan had 4 direct reports, each with different needs, skill levels, and areas of focus. Brendan received extremely positive upwards feedback throughout his tenure, and his team only ever had the highest praise for him. He demonstrated leadership in guiding his team through

difficult sprints, as well as being a mentor by always prioritising 1 on 1 time with each engineer.

Finally, Brendan was an excellent individual contributor, being directly responsible for significant parts of our infrastructure setup, CI/CD pipelines, cybersecurity oversight, and enforcing industry standard development practices. Despite having to cover so many areas, he was always willing to roll his sleeves up and work directly on the tools as developer whenever necessary, and was always keen to take upon himself the most challenging development.

There were times where I was concerned we were stretching him too far, yet he always rose to the occasion with a smile.

Brendan will make an excellent addition to your organisation as a Lead or Head of Engineering. He is an intelligent, conscientious individual who possesses significant technical and interpersonal skills - a rare combination and one that will make a big impact should you hire him.

Hamish Songsmith

Head of Project Delivery at 4mation, 2020

I was fortunate to work with Brendan at 4mation. He became an exceptionally reliable go-to dev who often went above and beyond his role leading and supporting his peers. Always hungry to learn, seeing the projects he was working on outside of his 9-5 were always interesting.

One of the traits I appreciated most from Brendan was his ability to work through problems instead of letting them overwhelm him and block progress.

Here's hoping our professional paths cross again.

Brett Daniels

Lead Web Developer at Solutions Outsourced, 2014

I can confirm that I have worked closely with Brendan Murty for a little over five years. In my position as Lead Web Developer at Solutions Outsourced, Brendan worked under my leadership and guidance for the majority of his employment.

In the past two years in particular Brendan has worked directly with me in the position of Lead Developer of our Siteflex Classic project, relieving my previous duties of this role. I have been impressed with Brendan's handling of the position - asking appropriate questions when required, but also working well to independently craft solutions.

I have been most impressed with Brendan's passion, which goes hand in hand with his ability to listen and learn. Thanks to this, Brendan's skills have grown at an impressive rate during his employment. Brendan has developed the skill to look at

tasks objectively, keeping calm under pressure while aiming to achieve the best results for clients.

Brendan's eye for detail, in particular with regard to thorough planning and documentation, is also highly noteworthy.

I can confidently recommend Brendan for any future Web Developer positions thanks to the above observations. I am also happy to speak on Brendan's behalf if any further information is desired.
